

A new species of the highly polytypic South American rodent *Ctenomys* increases the diversity of the magellanicus clade

Supplementary material 8, Figure S3. Ordination of *Ctenomys pulcer* sp. nov., *Ctenomys bidaii*, *Ctenomys magellanicus fueguinus*, and *Ctenomys magellanicus* LB in the morphospace defined by the first two principal components of the aligned Procrustes coordinates (APC) of lateral view of cranial shape variation. Shape changes associated with positive and negative values of both axes are shown as wireframes: black dots and lines indicate shape changes with respect to the mean configuration indicated with orange lines. Abbreviations: H, holotype; LB, Lago Buenos Aires County (Santa Cruz Province, Argentina).
