Abstract

The undermining of the therapeutic effectiveness of antibiotics by their widespread use is causing the emergence of antimicrobial resistance, which is a major threat for both animal and human health. Since most veterinary antibiotics employed in livestock production are excreted essentially unaltered, they have been identified as major contributors of environmental contamination. However, the efforts of monitoring antimicrobial effects are focused on humans and livestock, neglecting the environment. The European Union institutions recognized this gap in the appreciation of the issue, and adopted an approach that includes to prioritize environmental tracking and to build the tools to make it economically accessible. This abstract has three main targets. Firstly, to fill the gap applying the IT methodological approach (the soil vulnerability map to antibiotic contamination) developed by De La Torre et al. (2012). Secondly, to identify the main livestock species and scenarios (agriculture and pasture) to be prioritized in surveillance efforts. Finally, to implement the code of agriculture practices and the stocking rates of grazing animals based on high vulnerability areas for antibiotic contamination. To facilitate the implementation of this risk evaluation procedure, we developed an [interactive tool](#) that allows to obtain downloadable maps of soil vulnerability to contamination for several land use (agriculture and pasture) and livestock (cattle, pig and chicken) scenarios for any veterinary antibiotics. Additionally, the tool allows to obtain a plot of the mean vulnerability of each considered administrative unit. We implemented the European Union countries as an example, but the tool could be applied to individual countries or even regional or sub-national scales.

Keywords

Antimicrobial, environmental impact assessment, agriculture, pasture, surveillance.

Presenting author

Antonio Rodríguez

Presented at

One Health EJP Annual Scientific Meeting Satellite Workshop 2021 Software Fair

Acknowledgements

The authors would like to thank the office of the Sub-Directorate General for Animal Health and Livestock Hygiene, Spanish Ministry of Agriculture, Fisheries, and Food, for their assistance in the data curation process.

Funding program

RTI208_095586_B_C21 (Spanish Ministry of Science and Innovation)

773830 (European Union's Horizon 2020 Research and Innovation program)

Grant title

Toward the availability and use of "safe, effective and affordable" antibiotics (RTI2018_095586_B_C21).

One Health European Joint Programme (RTI2018_095586_B_C21).

Hosting institution

National Institute for Agricultural and Food Research and Technology (INIA)

Author contributions

Ana de la Torre: Conceptualization, Methodology, Supervision, Writing - Original Draft, Writing - Review & Editing.

Antonio Rodriguez: Methodology, Resources (computing), Formal analysis, Writing - Original Draft, Writing - Review & Editing.

Conflicts of interest

The authors have no conflict of interest to declare.
